## St George Girls High School

### Trial Higher School Certificate Examination

2017

# Mathematics Extension 1

#### General Instructions

- Reading time – 5 minutes
- Working time – 2 hours
- Write using black pen
- Board-approved calculators may be used
- A reference sheet is provided
- In Questions 11 – 15, show relevant mathematical reasoning and/or calculations

|                   |            |
|-------------------|------------|
| <b>Section I</b>  | /10        |
| <b>Section II</b> |            |
| Question 11       | /12        |
| Question 12       | /12        |
| Question 13       | /12        |
| Question 14       | /12        |
| Question 15       | /12        |
| <b>Total</b>      | <b>/70</b> |

#### Total Marks – 70

#### Section 1

Pages 3 – 6

#### 10 marks

- Attempt Questions 1 – 10
- Allow about 15 minutes for this section
- Answer on the multiple choice answer sheet provided at the back of this paper

#### Section II

Pages 7 – 11

#### 60 marks

- Attempt Questions 11 – 15
- Allow about 1 hour and 45 minutes for this section
- Begin each question in a new writing booklet

Students are advised that this is a Trial Examination only and does not necessarily reflect the content or format of the Higher School Certificate Examination.

## Section I

10 marks

Attempt Questions 1 – 10

Allow about 15 minutes for this section

Use the multiple-choice answer sheet for Questions 1-10

- 1 The points  $A$ ,  $B$  and  $C$  lie on a circle with centre  $O$ , as shown in the diagram.

The size of  $\angle AOC$  is  $\frac{4\pi}{5}$  radians.

Not to scale

What is the size of  $\angle ABC$  in radians?

- (A)  $\frac{3\pi}{10}$
- (B)  $\frac{\pi}{2}$
- (C)  $\frac{3\pi}{5}$
- (D)  $\frac{4\pi}{5}$
- 2 Which of the following is the exact value of  $\int_{\frac{3}{\sqrt{2}}}^3 \frac{4 \, dx}{\sqrt{9-x^2}}$ ?
- (A)  $-\pi$
- (B)  $-\frac{\pi}{4}$
- (C)  $\frac{\pi}{4}$
- (D)  $\pi$

- 3 What are the coordinates of the point that divides the interval joining  $P(2, 1)$  and  $Q(2, 8)$  internally in the ratio 3: 4?
- (A)  $(1, 7)$   
(B)  $(2, 4)$   
(C)  $(2, 7)$   
(D)  $(4, 2)$
- 4 An oil slick is in the shape of a circle. Its surface area is increasing at a rate of  $10 \text{ m}^2/\text{s}$ . Let  $r$  metres be the radius of the oil slick in  $t$  seconds.

The rate of increase of  $r$  in  $\text{m/s}$ , is given by

- (A)  $\frac{5}{\pi r}$   
(B)  $\frac{20}{\pi r}$   
(C)  $\frac{10}{\pi r^2}$   
(D)  $\frac{1}{20\pi r}$
- 5 Let  $f(x) = \frac{2}{x-3} + 1$ .

The equations of the asymptotes of the graph of the inverse function  $f^{-1}(x)$  are

- (A)  $x = 1$  and  $y = 3$   
(B)  $x = 1$  and  $y = -3$   
(C)  $x = 3$  and  $y = 1$   
(D)  $x = -3$  and  $y = -1$

- 6 A particle moves in a straight line such that it's displacement from the origin is  $x$  metres.

The velocity of the particle at any point is given by  $v = 2x^2 - 3$  m/s.

Find the acceleration of the particle when it is 2 units to the right of the origin.

(A)  $-\frac{2}{3}$  m/s<sup>2</sup>

(B) 5 m/s<sup>2</sup>

(C) 8 m/s<sup>2</sup>

(D) 40 m/s<sup>2</sup>

- 7 The function  $f(x) = \sin x - \frac{2x}{3}$  has a real root close to  $x = 1.5$ .

Let  $x = 1.5$  be a first approximation to the root.

What is the second approximation to the root using Newton's method?

(A) 1.495

(B) 1.496

(C) 1.503

(D) 1.504

- 8 If  $\sqrt{3} \tan x = -1$  which expression gives all the possible values of  $x$ , where  $n$  is an integer?

(A)  $x = 2n\pi \pm \frac{\pi}{6}$

(B)  $x = n\pi - \frac{5\pi}{6}$

(C)  $x = n\pi + \frac{\pi}{6}$

(D)  $x = n\pi - \frac{\pi}{6}$

9 What is the domain and range of  $y = 3 \sin^{-1}(2x)$  ?

- (A) Domain:  $-\frac{1}{2} \leq x \leq \frac{1}{2}$  . Range  $-\frac{1}{3} \leq y \leq \frac{1}{3}$   
(B) Domain :  $-2 \leq x \leq 2$  . Range  $-\frac{1}{3} \leq y \leq \frac{1}{3}$   
(C) Domain :  $-\frac{1}{2} \leq x \leq \frac{1}{2}$  . Range  $-\frac{3\pi}{2} \leq y \leq \frac{3\pi}{2}$   
(D) Domain :  $-2 \leq x \leq 2$  . Range  $-\frac{3\pi}{2} \leq y \leq \frac{3\pi}{2}$

10 The roots of  $2x^3 - 6x^2 - 8x + 12 = 0$  are  $\alpha$ ,  $\beta$  and  $\gamma$ .

What is the value of  $(\alpha + 2)(\beta + 2)(\gamma + 2)$  ?

- (A)  $-12$   
(B)  $-6$   
(C)  $6$   
(D)  $12$

**End of Section I**

## Section II

60 marks

Attempt Questions 11 – 15

Allow about 1 hour and 45 minutes for this section

Answer each question in the appropriate writing booklet.

Your responses should include relevant mathematical reasoning and/or calculations.

---

| Question 11 (12 marks) Use a separate writing booklet                                                                       | Marks |
|-----------------------------------------------------------------------------------------------------------------------------|-------|
| (a) Find the size of the acute angle between the lines $x - y - 4 = 0$ and $3x - y + 4 = 0$ . Answer to the nearest degree. | 2     |
| (b) Differentiate $y = \log_e(\sin^{-1}x)$                                                                                  | 2     |
| (c) Find $\int \frac{1}{9+x^2} dx$                                                                                          | 2     |
| (d) Evaluate $\lim_{x \rightarrow 0} \frac{3x}{\sin 2x}$                                                                    | 2     |
| (e) Show that $(x + 3)$ is a factor of $x^3 - 3x^2 - 10x + 24$ and hence factorise $x^3 - 3x^2 - 10x + 24$ fully.           | 4     |

End of question 11

**Question 12 (12 marks) Use a separate writing booklet** **Marks**

(a) Evaluate  $\int_{-1}^0 x\sqrt{1+x} \, dx$ , using the substitution  $u = 1 + x$  **3**

(b) Solve the inequality  $\frac{2x}{x-1} \geq 1$  **3**

(c) Find the exact value of  $\sin(2 \tan^{-1} \frac{1}{2})$  **2**

- (d) The diagram below shows the trajectory of a ball thrown horizontally, at a speed of  $50 \text{ ms}^{-1}$ , from the top of a tower 90 metres above ground level.

The ball strikes the ground  $d$  metres from the base of the tower.

- (i) Show that the equations describing the trajectory of the ball are: **2**

$$x = 50t \text{ and } y = 90 - \frac{1}{2}gt^2$$

where  $g$  is the acceleration due to gravity and  $t$  is the time in seconds.

- (ii) Prove that the ball strikes the ground at time  $t = 6\sqrt{\frac{5}{g}}$  seconds. **1**

- (iii) How far from the base of the tower does the ball strike the ground? **1**

**End of question 12**

**Question 13 (12 marks) Use a separate writing booklet**

**Marks**

- (a) (i) Express  $\sqrt{3}\sin t + \cos t$  in the form  $R\sin(t + \alpha)$  where  $\alpha$  is in radians,  
and  $0 \leq \alpha \leq \frac{\pi}{2}$

**2**

- (ii) Hence, or otherwise, find the solutions of the equation

**2**

$$\sqrt{3}\sin t + \cos t = \sqrt{3} \text{ for } 0 \leq t \leq 2\pi$$

- (b) The region bounded by the graph and the  $x$ -axis between and is rotated about the  $x$ -axis to form a solid

**3**

Find the exact volume of the solid.

- (c) Newton's law of cooling states that when an object at temperature  $T^\circ\text{C}$  is placed in an environment at temperature  $T_0^\circ\text{C}$ , the rate of the temperature loss is given by the equation  $\frac{dT}{dt} = -k(T - T_0)$  where  $t$  is the time in minutes and  $k$  is a positive constant.

- (i) Show that  $T = T_0 + Ae^{-kt}$  satisfies the above equation.

**2**

- (ii) An object whose initial temperature is  $60^\circ\text{C}$  is placed in a room in which the internal temperature is maintained at  $12^\circ\text{C}$ . After 25 minutes, the temperature of the object is  $30^\circ\text{C}$ .  
How long will it take for the object's temperature to reduce to  $15^\circ\text{C}$ ?

**3**

**End of question 13**

**Question 14 (12 marks) Use a separate writing booklet** **Marks**

- (a)  $P(2at, at^2)$  is any point on the parabola  $x^2 = 4ay$ . The line  $d$  is parallel to the tangent at  $P$  and passes through the focus  $S$  of the parabola.

(i) Show the equation of the tangent at  $P$  is  $y = tx - at^2$  1

(ii) Find the equation of the line  $d$ . 1

(iii) The line  $d$  intersects the  $x$ -axis at the point  $R$ .  
 Find the coordinates of the midpoint,  $M$ , of the interval  $RS$ . 2

(iv) Find the equation of the locus of  $M$ . 1

- (b) Simplify  $\cos(2\cos^{-1}x)$  and hence evaluate  $\int_0^{\frac{1}{2}} \cos(2\cos^{-1}x) dx$ . 2

- (c) A particle is moving in a straight line performing Simple Harmonic Motion.

At time  $t$  seconds it has a displacement  $x$  metres from a fixed point  $O$  on the line given by

$$x = 1 + 2\cos\left(2t - \frac{\pi}{3}\right)$$

(i) Show that  $\ddot{x} = -4(x - 1)$  1

(ii) Find the centre of the motion and the time taken for the particle to first reach maximum speed. 2

(iii) Find the first time the particle is at rest and the amplitude of the motion 2

**End of question 14**

**Question 15 (12 marks) Use a separate writing booklet**

**Marks**

- (a) Use Mathematical Induction to show that  $5^n > 4^n + 3^n$   
 for all integers  $n \geq 3$

**3**

(b)

In the diagram, CD is the diameter of the circle, centre O, and CR is a tangent to the circle C.

The line DT intersects the circle at B and CR at T.

The tangent to the circle at B intersects CR at A and  $\angle BCA = \theta$ .

Copy this diagram into your examination booklet.

- (i) Prove that  $\angle ABT = \frac{\pi}{2} - \theta$ .

**2**

- (ii) Prove that  $AC = AT$

**2**

**Question 15 continues on next page**

**Question 15 continued**

(c)

2

A person observes the angle of elevation of the top of a tree, which is  $h$  metres tall, from two positions. From a point  $X$ , due south of the tree, it is  $20^\circ$  and from the point  $Y$ , due east of the tree, it is  $28^\circ$ . The distance  $XY$  is 500m.

(d)

3

A ladder 6 metres long has its upper end against a vertical wall and its lower end on the horizontal floor.

The ladder is initially parallel to the wall, with the lower end at the origin.

The lower end moves away from the wall at a constant speed of 2m/s.

Find the speed at which the upper end moves down the wall two seconds after the lower end has left the wall.

**End of paper**

# MATHEMATICS EXTENSION I – QUESTION

2017 Mathematics Extension 1

Multiple choice.

## SUGGESTED SOLUTIONS

MARKS

MARKER'S COMMENTS

The points  $A$ ,  $B$  and  $C$  lie on a circle with centre  $O$ , as shown in the diagram.

The size of  $\angle AOC$  is  $\frac{4\pi}{5}$  radians.

1.

Not to scale

What is the size of  $\angle ABC$  in radians?

$$\begin{aligned} \text{reflex angle } \angle AOC &= 2\pi - \frac{4\pi}{5} \\ &= \frac{10\pi}{5} - \frac{4\pi}{5} \\ &= \frac{6\pi}{5} \end{aligned}$$

$$\begin{aligned} \angle ABC &= \frac{1}{2} \times \frac{6\pi}{5} \\ &= \frac{3\pi}{5} \end{aligned}$$

Answer C.

$$2. \int_{\frac{3}{\sqrt{2}}}^3 \frac{4 dx}{\sqrt{9-x^2}}$$

$$= \int_{\frac{3}{\sqrt{2}}}^3 \frac{4 dx}{\sqrt{3^2-x^2}}$$

$$= 4 \left[ \sin^{-1}\left(\frac{x}{3}\right) \right]_{\frac{3}{\sqrt{2}}}^3$$

$$= 4 \left[ \sin^{-1}\left(\frac{3}{3}\right) - \sin^{-1}\left(\frac{\frac{3}{\sqrt{2}}}{3}\right) \right]$$

$$= 4 \left[ \sin^{-1}1 - \sin^{-1}\left(\frac{1}{\sqrt{2}}\right) \right]$$

$$= 4 \left[ \frac{\pi}{2} - \frac{\pi}{4} \right]$$

$$= \pi$$

Answer D.

# MATHEMATICS EXTENSION I – QUESTION

## SUGGESTED SOLUTIONS

## MARKS

## MARKER'S COMMENTS

3.  $P(2, 1)$   $Q(2, 8)$

$$= \left[ \frac{4(2) + 3(2)}{3+4}, \frac{4(1) + 3(8)}{3+4} \right]$$

$$= \left( \frac{8+6}{7}, \frac{4+24}{7} \right)$$

$$= (2, 4)$$

Answer B.

4.

$$A = \pi r^2$$

$$\frac{dA}{dr} = 2\pi r$$

$$\frac{dA}{dt} = \frac{dA}{dr} \cdot \frac{dr}{dt}$$

$$10 = 2\pi r \cdot \frac{dr}{dt}$$

$$\frac{10}{2\pi r} = \frac{dr}{dt}$$

$$\therefore \frac{dr}{dt} = \frac{5}{\pi r}$$

Answer A.

5.  $f(x) = \frac{2}{x-3} + 1$  has  $x=3$  &  $y=1$  as asymptotes

$f(x)$  has

$\therefore$  the inverse has asymptotes  $y=3$  &  $x=1$ .

Answer A.

# MATHEMATICS EXTENSION I – QUESTION

## SUGGESTED SOLUTIONS

## MARKS

## MARKER'S COMMENTS

$$\begin{aligned}
 6. \quad a &= \frac{d}{dx} \frac{1}{2} v^2 \\
 &= \frac{d}{dx} \left[ \frac{2x^2 - 3}{2} \right]^2 \\
 &= \frac{d}{dx} \left[ \frac{4x^4 - 12x^2 + 9}{2} \right] \\
 &= \frac{d}{dx} (2x^4 - 6x^2 + 4.5) \\
 &= 8x^3 - 12x
 \end{aligned}$$

When  $x = 2$

$$\begin{aligned}
 a &= 8(2)^3 - 12(2) \\
 &= 64 - 24 \\
 &= 40 \text{ m/s}^2
 \end{aligned}$$

Answer D.

$$\begin{aligned}
 7. \quad f(x) &= \sin x - \frac{2x}{3} \\
 f'(x) &= \cos x - \frac{2}{3}
 \end{aligned}$$

Formula sheet says

$$x_2 = x_1 - \frac{f(x_1)}{f'(x_1)}$$

$$\begin{aligned}
 f(1.5) &= \sin(1.5) - \frac{2 \times 1.5}{3} \\
 &= \sin(1.5) - 1
 \end{aligned}$$

$$\begin{aligned}
 f'(1.5) &= \cos(1.5) - \frac{2}{3} \\
 x_1 &= 1.5
 \end{aligned}$$

$$\therefore x_2 = x_1 - \frac{f(x_1)}{f'(x_1)}$$

$$\begin{aligned}
 &= 1.5 - \frac{[\sin(1.5) - 1]}{\cos 1.5 - \frac{2}{3}} \\
 &= 1.496 \quad (3 \text{ dp}).
 \end{aligned}$$

Answer B.

$$\begin{aligned}
 8) \quad \frac{\sqrt{3}}{\sqrt{3}} \tan x &= -\frac{1}{\sqrt{3}} \\
 \tan x &= -\frac{1}{\sqrt{3}}
 \end{aligned}$$

$$\tan \frac{\pi}{6} = \frac{1}{\sqrt{3}}$$

formula sheet says...

$$\tan \theta = 2$$

$$\therefore x = n\pi + \tan^{-1}\left(-\frac{1}{\sqrt{3}}\right)$$

$$\theta = n\pi + \tan^{-1} 2.$$

$$= n\pi - \frac{\pi}{6}.$$

Answer D.

# MATHEMATICS EXTENSION I – QUESTION

## SUGGESTED SOLUTIONS

## MARKS

## MARKER'S COMMENTS

9.  $y = 3 \sin^{-1}(2x)$

Background

If  $y = \sin^{-1}x$

$$-1 \leq x \leq 1$$

$$-\frac{\pi}{2} \leq y \leq \frac{\pi}{2}$$

If  $y = 3 \sin^{-1}(2x)$

$$-1 \leq 2x \leq 1$$

$$\frac{y}{3} = \sin^{-1}(2x)$$

$$-\frac{1}{2} \leq x \leq \frac{1}{2}$$

$$-\frac{\pi}{2} \leq \frac{y}{3} \leq \frac{\pi}{2}$$

$$-\frac{3\pi}{2} \leq y \leq \frac{3\pi}{2}$$

Answer C.

10.  $2x^3 - 6x^2 - 8x + 12 = 0$ .  $a=2$   $b=-6$   $c=-8$   $d=12$

$$\alpha + \beta + \gamma = -\frac{b}{a}$$

$$\alpha + \beta + \gamma = \frac{6}{2} = 3$$

$$\alpha\beta + \alpha\gamma + \beta\gamma = \frac{c}{a}$$

$$\alpha\beta + \alpha\gamma + \beta\gamma = \frac{-8}{2} = -4$$

$$\alpha\beta\gamma = -\frac{d}{a}$$

$$\alpha\beta\gamma = \frac{-12}{2} = -6$$

$$(\alpha+2)(\beta+2)(\gamma+2)$$

$$= (\alpha+2)(\beta\gamma + 2\beta + 2\gamma + 4)$$

$$= \alpha\beta\gamma + 2\alpha\beta + 2\alpha\gamma + 4\alpha + 2\beta\gamma + 4\beta + 4\gamma + 8$$

$$= \alpha\beta\gamma + 2(\alpha\beta + \alpha\gamma + \beta\gamma) + 4(\alpha + \beta + \gamma) + 8$$

$$= -6 + 2(-4) + 4(3) + 8$$

$$= -6 - 8 + 12 + 8$$

$$= -14 + 20$$

$$= 6$$

Answer C.

## MATHEMATICS EXTENSION I - QUESTION 14

## SUGGESTED SOLUTIONS

## MARKS

## MARKER'S COMMENTS

(a)  $x^2 = 4ay$

1.

some students

(1)  $y = \frac{x^2}{4a}$

found  $\frac{dx}{dt}$ 

$$\frac{dy}{dx} = \frac{2x}{4a}$$

and  $\frac{dy}{dt}$ 

$$= \frac{x}{2a}$$

used  $\frac{dy}{dx} = \frac{\frac{dy}{dt}}{\frac{dx}{dt}}$ When  $x = 2at$ 

$$\frac{dy}{dx} = \frac{2at}{2a}$$

Well done.

$$= t. \quad \leftarrow \text{must prove}$$

 $\therefore$  gradient of tangent at  $(2at, at^2)$  is  $t$ .equation of tangent at  $(2at, at^2)$ 

$$y - y_1 = m(x - x_1)$$

$$y - at^2 = t(x - 2at)$$

$$y - at^2 = tx - 2at^2$$

$$y = tx - 2at^2 + at^2$$

$$y = tx - at^2$$

(ii) line  $d$  parallel to tangent at  $P$  through focus  
for parallel lines  $m_1 = m_2$ 

1

. Some students  
incorrectly  
stated the focus.

$$\therefore m = t$$

Focus  $(0, a)$ 

$$y - y_1 = m(x - x_1)$$

$$y - a = t(x - 0)$$

. well done.

$$y - a = tx$$

$$y = tx + a$$

# MATHEMATICS EXTENSION I – QUESTION 14

## SUGGESTED SOLUTIONS

## MARKS

## MARKER'S COMMENTS

pg 2 Q 14

iii)

$$y = tx + a$$

for  $x$  intercept,  $y = 0$ .

$$0 = tx + a$$

$$tx = -a$$

$$x = -\frac{a}{t}$$

$$\therefore R \left( -\frac{a}{t}, 0 \right)$$

$$S = (0, a)$$

R(1)

well done.

M = Midpoint RS

$$= \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$$

$$= \left( \frac{-\frac{a}{t} + 0}{2}, \frac{0 + a}{2} \right)$$

$$= \left( -\frac{a}{2t}, \frac{a}{2} \right)$$

M(1)

0

iv)

$$M = \left( -\frac{a}{2t}, \frac{a}{2} \right)$$

$$x = -\frac{a}{2t}$$

$$y = \frac{a}{2}$$

$\therefore y$  is independent of  $x$ .

$x$  has a domain of all  $x$  except  $x=0$

(1)

only 1 student noted

$x \neq 0$ .

$\therefore$  equation of locus is  $y = \frac{a}{2}$  ( $x \neq 0$ ).

$x=0$ , (this is because if at vertex, line through focus parallel to tangent will have no  $x$  intercept).

|      | $\int_0^{\frac{1}{2}} \cos(2 \cos^{-1} x) dx$              | 1     |                                     |
|      | $= \int_0^{\frac{1}{2}} (2x^2 - 1) dx$                     |       |                                     |
|      | $= \left[ \frac{2x^3}{3} - x \right]_0^{\frac{1}{2}}$      |       |                                     |
|      | $= \frac{1}{12} - \frac{1}{2} = 0$                         |       |                                     |
|      | $= -\frac{5}{12}$                                          |       |                                     |
|      |                                                            |       | Students needed to                  |
| (i)  | $x = 1 + 2 \cos(2t - \frac{\pi}{3})$                       | 1.    | Show <u>all</u>                     |
|      | $\dot{x} = -4 \sin(2t - \frac{\pi}{3})$                    |       | steps for                           |
|      | $\ddot{x} = -8 \cos(2t - \frac{\pi}{3})$                   |       | full marks                          |
|      | $= -8 [2 \cos(2t - \frac{\pi}{3}) + 1 - 1]$                |       |                                     |
|      | $= -4 [\underbrace{2 \cos(2t - \frac{\pi}{3}) + 1}_{x-1}]$ |       |                                     |
|      | since $x = 1 + 2 \cos(2t - \frac{\pi}{3})$                 |       |                                     |
| (ii) | Centre of motion. $\ddot{x} = 0$                           | 1.    |                                     |
|      | $0 = -4(x-1)$                                              |       |                                     |

$\therefore x = 1$  is the centre of the motion

$$\therefore \text{if } \sin(2t - \frac{\pi}{3}) = \pm 1$$

$$2t - \frac{\pi}{3} = \frac{\pi}{2} \pm n\pi \quad n \text{ integer}$$

$$2t = \frac{5\pi}{6} \pm n\pi$$

$$t = \frac{5\pi}{12} \pm \frac{n\pi}{2}$$

$\therefore$  first time is when  $n=0$

$\therefore$  first time max<sup>m</sup> speed is reached is  $t = \frac{5\pi}{12}$  seconds

(iii) if at rest,  $v=0$ .  $t=?$  first time  $v=0$ .

$$x = -4 \sin(2t - \frac{\pi}{3})$$

$$0 = \sin(2t - \frac{\pi}{3})$$

$$\therefore 2t - \frac{\pi}{3} = n\pi \quad n \text{ integer}$$

$$2t = \frac{\pi}{3} + n\pi \quad n \text{ integer}$$

$$t = \frac{\pi}{6} + \frac{n\pi}{2}$$

$\therefore$  first time will be when  $n=0$

$$\therefore t = \frac{\pi}{6} \text{ seconds} \quad (1)$$

$$\text{amplitude} = \underline{2} \quad (1)$$
